

Light modules and PCB for decoder replacement in Marklin Locos, part no. 8081

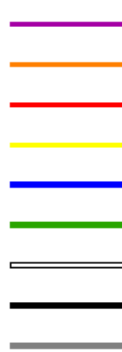

NEM 650/652 Interface

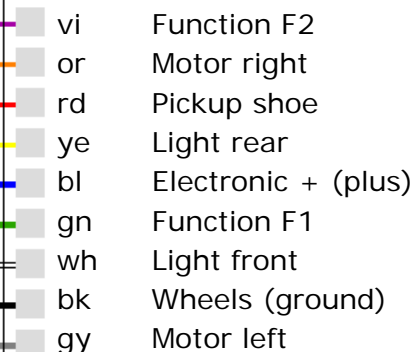

Marklin colours

DCC colours

ESU LokPilot

(c) 2004 R.Lüssi www.stayathome.ch

IMPORTANT NOTICE:

Be very careful when placing the housing on the loco. The light conductors inside the housing might damage the LEDs if not fitted correctly.

1. Place the housing slightly slanted on one side of the loco. Make sure the light conductors in the housing don't touch the LEDs of the light module.
2. Push the housing to the other side and hold in that position.
3. Lower the other end of the housing carefully. Do not force the housing into position!
