

Micro light module, item no. 8091-D

The light module 8091D (Duo) has been specially developed for model railway lighting.

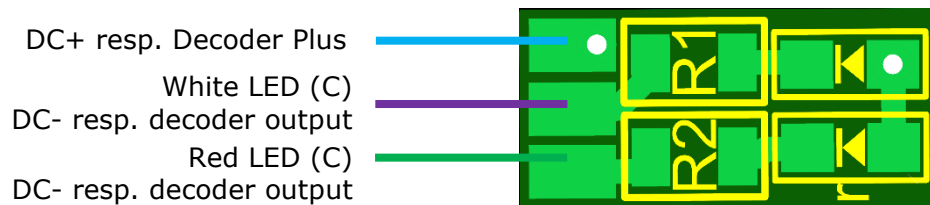

The module is equipped with one white and one red LED.

It is connected to a DC voltage (up to 25V) or directly to decoder outputs.

The module has a size of 8.6 x 4 mm and therefore also fits in places where only limited space is available, for example as locomotive lighting, for model houses of all gauges, as platform lighting, etc.

Connection

Max. 25V DC
